

Why you should drink more water...

All living things need water. You are certainly aware of the fact that we as humans are also made up of almost 70% water. The water in our bodies aids our metabolism and is responsible for controlling body temperature, transporting nutrients and - above all - **for cleansing functions**. We lose around **2 litres of this fluid each day**. To keep our bodies healthy, we must replace this amount as continuously as possible.

No fluid is better suited for this purpose than **pure water** itself! Beverages containing sugar or alcohol also contain calories, which often means that they only make us thirstier. Because of their stimulating effect, neither coffee or black tea should be drunk in the quantities required for fluids replacement.

The drinking of pure water also helps against weight problems, because the organism burns up around 50 kcal without compensation for each litre of water consumed.

Water keeps you fit - **do your part and drink pure water** - you will thank yourself for doing so!

Why Carbonit® Drinking Water Filters?

Water has the unique characteristic of being able to dissolve all kinds of substances. As a result, it unfortunately also transports **undesirable substances** out of the long pipeline networks and **into our households**. For that reason, installing a high-quality filtering system at home is the only useful way of ensuring that the water obtained from the network system is of optimum quality.

You can be sure that the vast majority of potentially **harmful substances will be filtered** out when you use the patented Drinking Water Filters from CARBONIT®. Even **pharmaceutical residues and heavy metals** are reliably removed and kept from re-entering the water, even in the event of overloads!

The exceptional **performance, safety and hygiene** of the filters has in fact been tested independently and **confirmed** by the German TÜV agency.

Discover for yourself how **simple it is to achieve** the very best in water: CARBONIT® Drinking Water Filters are **easy to install**, simple to maintain and quite **inexpensive**.

Just one reason why you should drink more water.

But 6 good reasons why you should filter your tap water.

1. We are the ones responsible for our own diets and for those of our children.

Regulations stipulating the amounts of contaminants permitted in drinking water are of course already in effect. But how are these **limit values** determined? A maximum of 0.1 mg/l of copper is recommended **for infants**, for example, but 2 mg/l is permitted.

2. Drinking water should not contain any pollutants.

Not in any amount, no matter how slight! After all, water is Foodstuff No. 1 for humans and not everything that is permitted is also healthy - e.g. copper or pharmaceutical residues. As far as our drinking water goes, the rule should be: **the fewer** foreign substances, **the better**.

3. It is a long road from the waterworks to your water faucet.

Our tap water is prepared for public consumption at the waterworks. The problem is that the water that is pumped through long pipeline networks and frequently ancient building pipe systems is **not always of the same quality** when it finally reaches our faucets.

4. It is more ecological to filter water than it is to purchase it.

Keeping a case of mineral water in the house requires not only physical strength but also enormous hygiene-related efforts on the part of the filling company. And it is also often the case that the transport route for one mineral water involves 2000 kilometres of lorry driving – a **burden on the environment** and unfortunately not always a guarantee of good quality

5. Filtering water saves time, money and effort.

Your body needs – depending on age and weight – **2 litres of fluids daily**, preferably in the form of water. Those who prefer mineral water have a **heavy load** to bear. Those who filter their tap water, on the other hand, always have fresh, good-tasting water on hand – with **no effort** and at far **less expense** to boot: a 4-person household with one CARBONIT® Drinking Water Filter can **save more than £350** per year, because mineral water can be dispensed with.

6. Filtered water simply tastes better.

Connoisseurs know: the flavour of tea and coffee can be enjoyed to the full with filtered water. Flavour elements and natural colours are better retained when cooking fresh vegetables. Plants and animals also respond to **the advantages of filtered water**.

CARBONIT® Drinking Water Filters are reliable, hygienic and inexpensive.

What more could one ask?

*Simple. Safe. Practical. Good.
Carbonit Filters in your kitchen.*

CARBONIT® SANUNO tabletop filters: inexpensive, flexible, quick to install.

CARBONIT® VARIO concealed filters with or without separate faucet: easy to use, just the way you like it.
